MULTIVISTA
CONSTRUCTION DOCUMENTATION

Historical Renovation

The renovation of historical sites is a delicate process that often includes guidelines that call for an effort to be made to preserve the original features of the facility during every step of the restoration. Many government entities expect extensive photographic and written documentation before, during and after restoration to maintain a record of the facility's condition. This documentation is often the key component to the funding and designation process for historic sites in the United States and Canada.

Multivista's state-of-the-art documentation system helps to preserve your project's renovation process from start to finish. Our Exact-Built™ system creates a comprehensive, time-stamped living record of your project with photos that are indexed to architectural plans and stored on a secure, online server. This provides all stakeholders an electronic, high-resolution reference tool that is easily accessible throughout all stages of construction.

Just-in-time construction photographs capture significant milestones over the life of the project to facilitate the documentation mandated for the historical renovation application process. These photos, coupled with integrated systems such as TeamTalk™ and 4-View Print & Email, allow you to communicate directly with your teammates, identify issues, and share project details with others. Multivista provides you with a complete archive of your project that will not only help to validate your historical certification, but will also preserve the restoration process for years to come.

Multivista's Exact-Built™ documentation system allows you to maintain a living record of your Historical Renovation project's condition at every stage of the construction process.
