

MULTIVISTA
CONSTRUCTION DOCUMENTATION

e-Builder®

Partners in Quality

Multivista and e-Builder are proud to join together to provide our clients access to the ultimate quality assurance and quality control platform. This strategic partnership will allow our mutually existing clients to access both their e-Builder and Multivista systems in one place, for total, more efficient project management.

The Multivista Exact-Built® documentation system is the global leader for construction photo documentation today. Multivista's state-of-the-art system creates a comprehensive record of the entire

construction project that is indexed by time and location, and hosted on our secure, online servers.

Multivista's proprietary software makes construction drawings into an interactive dashboard for accessing project information. The entire project team can then access and collaborate on thousands of inspection-grade, digital photographs, video and webcam documentation of the client's construction project(s) from groundbreaking through completion. Our independent third-party documentation is invaluable for verifying a wide variety of construction issues including schedule delays, change orders, RFI's and conflicts in design and construction – just to name a few.

Multivista delivers the most relevant, accurate and comprehensive project information available in the construction industry today. In today's world of tight time and even tighter budgets, Multivista helps to promote transparency, increase quality and reduce costs for better-built projects.

e-Builder develops the industry's most user-friendly, web-based capital program management and construction management software.

The company's flagship product, e-Builder Enterprise, helps improve project execution, resulting in increased productivity and quality, reduced cost, and faster project delivery. e-Builder works with some of North America's leading facility owner/operators and the companies that work on their behalf, including:

Caltech, The KLMK Group, The City of Arlington, The University of Chicago, Adams Management, The University of Pennsylvania Health System, The School District of Osceola County, Banner Health, Cedars-Sinai Medical Center, Amgen, and many more.

e-Builder helps enable project controls and audit tools to minimize the occurrence and impacts of preventable cost overruns, schedule delays, and claims through internal controls, accurate recordkeeping, contract administration, and change management methodologies. Primary modules include (but are not limited to): Cost, Schedule, Process, Automation, Executive Dashboards and Reporting, Document Controls, Planning, Bid distribution/analysis, and Integration to facilities management/financial systems.

Clients leveraging e-Builder and Multivista can experience cost reductions of up to 4% off their total capital project budget (reduced change orders, fewer claims, fewer preventable delays).

Multivista and e-Builder provide mutual clients efficient project management at every construction milestone to help maintain accountability and increase quality for better-built, better-managed projects.
