# MULTIVISTA + PROCORE for Project Management

BETTER TOGETHER FROM THE FIELD TO THE BOARDROOM

Multivista's seamless integration allows project teams to use Multivista-collected data to perform distinct, and critical, project functions within Procore. Across desktop, tablet, or mobile devices, see what the "Add to Procore" button can do for your team.

Requests for Information (RFIs)

Using our intuitive "pictures-over-plans" platform, even when far from the job site, project members can quickly locate and review Multivista-captured images of the area in question. Within moments, the RFI response, selected inspection-grade image, and precise location map will be reflected in Procore so the team can take action.

Change Events

Access Multivista's inspection-grade images, organized by date and location, to review existing as-built conditions, validate completed work, and confirm the change event. From Multivista's cloud-based platform, users can immediately add relevant project images into Procore's change event record, allowing for expedited change order proposals.

Meetings

Link Multivista progression, milestone, or webcam-captured images as an attachment to the record for an upcoming OAC or project team meeting, or after the fact for carry over action items.

Photos

Upload an unlimited number of Multivista-captured images to Procore photo albums from anywhere with an internet connection.

# MULTIVISTA + PROCORE for Quality & Safety

## BETTER TOGETHER FROM THE FIELD TO THE BOARDROOM

Multivista's robust integration creates simplified workflows for the field teams responsible for critical commissioning, quality control, safety, and warranty work. From anywhere with an internet connection, field teams can leverage Multivista's visual documentation through their Procore-managed project.

Observations

Attach Multivista's inspection-grade photos to quality, safety, commissioning, warranty, and work-to-complete Observations in Procore throughout every phase of the project. Procore users can now conduct a far more comprehensive percentage of Observations by leveraging Multivista-captured as-built photos and advanced integration functionalities – including the ability to change the status of the Observation directly from Multivista.

Daily Logs & Webcams

Multivista-captured photos can be synced from our intuitive platform to 16 distinct daily logs within Procore in seconds, including weather delays, equipment records, safety violations, and delivery reports. Users can even embed their Multivista webcam feed into their Procore Project homepage for real time viewing of job site conditions.

Punch List

Project team members can provide relevant context by linking any Multivista's inspection-grade project images to a Procore punch list item, along with a pinpointed location map. Conversely, team members on the receiving end of a punch list item can leverage Multivista's mobile app to upload a new or existing image, add comments, and even change the Procore punch list status.
