CAPTURE Services for AECO

Hexagon's Capture services offer tailored services for general contractors, construction project owners, architects, engineers, and facilities managers struggling with reality capture documentation and accountability. Our comprehensive visual documentation captures as-built conditions throughout construction and at key milestones, verifying work in place. Unlike fragmented methods, our integrated approach includes photo, video, webcam, and laser scan documentation, plus a photo self-capture option via the Hexagon mobile app. Our Capture services reduce the risk of delays, costs, and disputes while preventing invasive troubleshooting during maintenance. Laser scanning, photos, and video are the foundation for Create (as-built modeling, visualization, and digital twins) and Analyze solutions (automated construction progress tracking and quality assurance).
